

BAHub - Phase 2: Requirement Gathering & Stakeholder Management

This document details the stakeholder directory, the strategic Power/Interest matrix, the communication plan, and the gathered requirements log for the **BAHub** implementation.

1. Stakeholder List & Directory

The following stakeholders have been identified as key participants in the lifecycle of the BAHub product workspace. This registry matches the dynamic roles within our multi-tenant SaaS schema.

Stakeholder Name	Title / Role	Department	Contact Information
Samantha Vance	Chief Product Officer	Product Management	samantha.vance@bahub-enterprise.com
Devon Miller	Lead Business Analyst	Business Analysis & PMO	devon.miller@bahub-enterprise.com
Marcus Vance	Principal Security Architect	Information Security	marcus.vance@bahub-enterprise.com
Elena Rostova	Director of Client Delivery	Consulting Operations	elena.rostova@bahub-enterprise.com
Rajesh Koothrapali	Lead QA Engineer	Quality Assurance	rajesh.k@bahub-enterprise.com
Sarah Jenkins	Product Owner (Sponsor)	Client Operations	sarah.jenkins@bahub-enterprise.com

2. Stakeholder Matrix (2x2 Power/Interest)

To manage relationships and expectations effectively, stakeholders are mapped onto a 2x2 grid based on their structural power (influence over project success/funding) and interest (operational impact on daily workflow).

Analysis of matrix alignments:

- **Manage Closely (High Power / High Interest):** Samantha Vance (CPO), Devon Miller (Lead BA), and Elena Rostova (Delivery Dir). These actors drive feature scoping, sign-offs, and product architecture.
- **Keep Satisfied (High Power / Low Interest):** Sarah Jenkins (Sponsor). Requires bi-weekly high-level status summaries and ROI updates.
- **Keep Informed (Low Power / High Interest):** Rajesh Koothrapali (Lead QA). Must be kept informed on stories backlog updates and QA test criteria changes to adjust verification scripts.
- **Monitor (Low Power / Low Interest):** Marcus Vance (Security). Monitored for SOC 2 checklist alignment and security scan requirements.

3. Stakeholder Communication Plan

Stakeholder Segment	Communication Channel	Frequency	Objective / Deliverable	Owner
Manage Closely	Project Alignment Sync (Live Demo)	Weekly	Sprint review, obstacle mitigation, requirement adjustments.	Lead BA
Keep Satisfied	Progress Status Report (Dashboard)	Bi-Weekly	High-level status updates, budget reviews, change request logs.	Project Manager
Keep Informed	Sprint Backlog Grooming	Daily	Daily backlog prioritization, acceptance criteria clarification.	Lead BA / PO
Monitor	Security Auditing Sync	Quarterly	SOC 2 compliance checklist verification, database scan logs.	Technical Lead

4. Gathered Requirements Log

Requirements gathered from stakeholders are divided into core categories. In accordance with BAHub database formatting, requirements are categorized as **Functional**, **Non-Functional**, **Technical**, and **User Interface (UI)**.

A. Business Requirements (BR)

- **BR-001: Multi-Tenant Workspace Isolation**
 - *Description:* The platform must segregate all data (requirements, stories, meetings, risks) by organization to ensure client confidentiality.
 - *Source:* Samantha Vance (CPO)
 - *Rationale:* Crucial for hosting enterprise accounts and consulting tenants securely.
- **BR-002: Real-time Requirement Co-Authoring**
 - *Description:* Enable multiple BAs to collaborate inside the requirements split grid simultaneously without causing overwriting conflicts.
 - *Source:* Devon Miller (Lead BA)
 - *Rationale:* Reduces requirements-gathering iteration duration during live stakeholder workshops.
- **BR-003: Bidirectional Jira & Confluence Sync**
 - *Description:* Allow BAs to publish user stories to Jira and BRD/FRD documents to Confluence directly from the BAHub interface.
 - *Source:* Elena Rostova (Director of Client Delivery)
 - *Rationale:* Eliminates manual double-entry of issues across tracking tools.

B. Functional Requirements (FR)

- **FR-001: Automatic Sequential Requirement ID Generation**
 - *Description:* The system must auto-generate sequential IDs (REQ-001 , REQ-002) scoped per project upon saving new requirements.
 - *Source:* Devon Miller (Lead BA)
 - *Rationale:* Enforces consistent naming conventions across requirements registers.
- **FR-002: Stakeholder Power/Interest Mapping**
 - *Description:* Provide an interface to register stakeholders with Power and Interest attributes, mapping them automatically to a visual 2x2 matrix.
 - *Source:* Devon Miller (Lead BA)
 - *Rationale:* Automates relationship matrix analysis for BAs.

- **FR-003: SWOT Matrix Quadrant Configurator**

- *Description:* Provide a 2x2 visual input grid mapping Strengths, Weaknesses, Opportunities, and Threats scoped to each project workspace.
- *Source:* Elena Rostova (Director of Client Delivery)
- *Rationale:* Facilitates strategic discovery workshops within the application.

- **FR-004: Gap Analysis Tracker**

- *Description:* Allow creation of gap analysis logs capturing Current State, Future State, Gap Description, and Action Plan, with Status tracking (Identified, In Progress, Resolved).
- *Source:* Devon Miller (Lead BA)
- *Rationale:* Structural tracking of process improvement actions.

- **FR-005: Document Sign-off Signatory Flow**

- *Description:* Implement a formal review and signature process allowing Project Managers or Admins to sign off on BRD/FRD documents.
- *Source:* Sarah Jenkins (Sponsor)
- *Rationale:* Enforces formal baseline audits before engineering kick-off.

C. Non-Functional Requirements (NFR)

- **NFR-001: Operational Security (Multi-Tenancy)**

- *Description:* Strict data access constraints ensuring users can never view, update, or edit resources belonging to another organization.
- *Source:* Marcus Vance (Security Architect)
- *Rationale:* Prevents cross-tenant security vulnerabilities.

- **NFR-002: Low-Latency Document Generation**

- *Description:* Markdown compilation to Word (.docx) and PDF (A4 format) must execute in under 10 seconds.
- *Source:* Devon Miller (Lead BA)
- *Rationale:* Ensures smooth performance during live presentations and downloads.

- **NFR-003: Real-time Presence Indicators**

- *Description:* WebSocket connection must broadcast collaborator active status and typing indicators within 500 milliseconds of action.
- *Source:* Samantha Vance (CPO)
- *Rationale:* Enhances collaboration feedback loops.

D. Technical Requirements (TR)

- **TR-001: SimpleJWT Authentication Session Management**

- *Description:* Secure token logins with automatic Axios refresh interceptors validating session duration and security.
- *Source:* Marcus Vance (Security Architect)
- *Rationale:* Mitigates session-hijacking and API abuse risk.

- **TR-002: Encrypted API Integrations Secrets Vault**

- *Description:* Jira and Confluence API tokens must be encrypted before database storage using SHA256-based Fernet symmetric keys.
- *Source:* Marcus Vance (Security Architect)
- *Rationale:* Protects third-party integration credentials.

- **TR-003: Daphne ASGI Server Routing**

- *Description:* Deploy Daphne as the production application server to support ASGI WebSockets alongside traditional WSGI REST HTTP traffic.
- *Source:* Tech Lead / DevOps
- *Rationale:* Enables unified deployment of standard API calls and real-time WebSocket presence.
