Version History

Version	Date	Author	Description of Changes
0.1	June 10, 2026	Samantha Vance (CPO)	Initial draft detailing product vision.
1.0	July 02, 2026	Samantha Vance (CPO)	Baseline approved for engineering release.

1. Product Vision & Value Proposition

Vision Statement

BAHub is the ultimate, unified workspace for Business Analysts and Product Consultants. It consolidates stakeholders, requirements, user stories, SWOT/GAP analyses, meeting notes, risk tracking, and document compilers into a single, real-time collaborative workspace that integrates with Jira and Confluence.

Problem Solved

BAs spend 30% of their working hours manually copy-pasting specs and aligning diagrams across fragmented tools. BAHub eliminates this overhead, providing a centralized platform that reduces requirements latency and prevents scope creep.

2. Target Audience & Personas

- **Primary Persona: Devon Miller (Lead Business Analyst)**
 - *Needs:* A clean interface to write, organize, and prioritize requirements, and instantly compile them into BRDs/FRDs for reviews.
 - *Pain Points:* Fragmented Excel files, manually copying user stories into Jira, and dealing with conflicting overrides in shared documents.
 - **Secondary Persona: Sarah Jenkins (Client Product Owner / Sponsor)**
 - *Needs:* Quick visibility into project status, risk vectors, change requests, and a simple interface to sign off on final documents.
 - *Pain Points:* Difficulty tracking requirement changes and review cycles across multiple email threads.
-

3. Product Roadmap & Milestones

The launch timeline for BAHub is divided into three key release milestones:

```
[M-1: Core Workspace (Months 1-3)] —> [M-2: Integrations & Collaboration (Months 4-6)] —> [M-3: Enterprise Scale & AI (Months 7-9)]
```

Milestone 1: Core Requirements Workspace (Month 1 - 3)

- **Features:** Multi-tenant setup, Project isolation, Stakeholder register, Requirements split grid, SWOT and GAP analyses dashboards.
- **Objective:** Release a functional standalone environment for requirements authoring.

Milestone 2: Team Collaboration & Integrations (Month 4 - 6)

- **Features:** Real-time WebSocket presence indicators, collaborative typing alerts, Document compilation with Sign-off workflows, PDF/Word downloads, and Jira/Confluence integration setup.
- **Objective:** Enable teams to co-author specifications and sync backlogs with existing platforms.

Milestone 3: Enterprise Scale & AI Playgrounds (Month 7 - 9)

- **Features:** AI assistant prompt interface, billing subscription plans, active session revocation controls, and centralized change audit logs.
 - **Objective:** Prepare the platform for commercial B2B SaaS deployments.
-

4. Key Performance Indicators (KPIs)

To evaluate the success of the BAHub deployment, we will track the following product metrics:

- **Daily Active User (DAU) Sessions:** Target average session length of > 45 minutes per active BA.
 - **Jira Sync Success Rate:** Maintain > 99.8% successful Celery sync operations to prevent backlog discrepancies.
 - **Document Compilation Speed:** Average Markdown-to-PDF/Word download compilation latency of under 5 seconds.
 - **Backlog Velocity Increase:** Target a 25% reduction in average duration from project kickoff to requirements sign-off.
-

5. UI Layout & User Experience (UX) Flow Descriptions

The interface uses a nature-inspired design with a forest green primary accent (#467235) and cream yellow highlight accent (#FFF78D).

5.1 Global Dashboard Shell (/dashboard)

- **Layout:** Collapsible left navigation sidebar, top breadcrumb banner with project switcher, and a main workspace area.
- **Sidebar Links:** Dashboard, Projects, Stakeholders, Requirements, Agile Backlog, SWOT/GAP, Risks & Changes, Documents Compiler, AI Assistant, Integrations, and Billing.
- **Widgets:** Quick stats cards displaying active requirements count, story completion percentage, active risk warnings, and pending change requests.

5.2 Notion-Style Split Editor View (/requirements)

- **Left-Hand Pane (40% width):** A clean list view of all project requirements, sorted by `req_id` . Includes a search bar and a "+ Add Requirement" button.
- **Right-Hand Pane (60% width):** Displays the active requirement's full detail form. When a user clicks a row in the list, the right pane instantly populates with the selected requirement's fields (Title, Description, Status, Priority, Type, and Stakeholder) without a page reload.

5.3 Power/Interest Stakeholder Matrix (`/stakeholders`)

- **Top Area:** A spreadsheet view to manage stakeholder records.
- **Bottom Area:** A visual 2x2 grid. Stakeholder cards are automatically positioned based on their Power and Interest settings:
 1. *Manage Closely* (Top-Right)
 2. *Keep Satisfied* (Top-Left)
 3. *Keep Informed* (Bottom-Right)
 4. *Monitor* (Bottom-Left)
